

## **GMDSS AIS SURVEYOR COURSE**

Danphone and MARTEC, Maritime and Polytechnic College offer all general radio operators a certified GMDSS AIS Surveyor Course.

The purpose of the course is to educate future radio surveyors on how to provide maritime inspection services and tests of radio communication equipment and AIS (automatic identification system) equipment. Furthermore, this approval program will ensure all participants become qualified radio surveyors with documented and implemented systems for training, control, verification and reporting.

On the GMDSS AIS Surveyor Course both new and experienced radio surveyors will be taught in technical inspections of GMDSS and AIS installations using Danphone's Futronic test box and how to fill in the data for the surveyor report.

The surveyor course is a technical, 5 day course, where participants:

- are educated in the rules and regulations that apply to GMDSS and AIS installations.
- learn how to perform technical inspections of GMDSS and AIS installations with a Futronic GMDSS-AIS test box.
- learn how to fill in the data for the surveyor report.

The survey results form the basis for the surveyor's approval decision, which shall be approved by the relevant classification society according to the radio inspection criteria.

### **[The first course takes place on the 6-10 May at MARTEC in Skagen, Denmark](#)**

The GMDSS AIS Surveyor Course is conducted in accordance with IMO COMSAR/Circ. 32 Harmonization of GMDSS Requirements for SOLAS Radio installation and DNV GMDSS survey reports. To enter the course, the participants must have an approved GOC radio certificate (General Operators Certificate) or other documentation for previous experience with radio operation.
